China's birth rate is now almost half that of India's. In 2019, the birth rate was 10.48 per 1,000 people, the lowest since 1949.

Since the establishment of the People's Republic of China in 1949, the party has been concerned with potential problems related to China's population growth and has introduced a series of policies for population control and regulation.
May 22nd, 2020 - population policy in China

The People's Republic of China (PRC) has the largest population in the world. At the end of 2002, the population in China excluding Hong Kong, Macao, and Taiwan was 1.284 billion, and the birth rate was 12.86 births per year per 1,000 population, which results in a doubling every fifty-five years. For information on population policy in China, see the Encyclopedia of China.

June 5th, 2020 - China's birth rate last year was at its lowest since the founding of the People's Republic in 1949, with 15.23 million births, dramatically lower than the 21.23 million officials had expected.

Thomas Scharping Birth Control in China 1949-2000

June 2nd, 2020 - Family policy and the growth of the population in China have been the subject of continuous attention for many years.
there was no research which provided an overall view of the policies and outcomes for these areas. This remarkable work by the German demographer Thomas Scharping on birth control and demography in China from 1949 to 2000 fills this gap.

Birth Control in China, 1949-2000: Population Policy and Demographic Development

May 25th, 2020—This comprehensive volume analyzes Chinese birth policies and population developments from the founding of the People's Republic to the 2000 Census. The main emphasis is on China's hardship number one under heaven—the highly controversial one-child campaign and the violent clash between family strategies and government policies it entails. Birth Control in China, 1949-2000 documents an

One Child Policy

June 6th, 2020—the one child policy was part of a birth planning program designed to control the size of the rapidly growing population of the People's Republic of China distinct from the family planning policies of most other countries which focus on providing contraceptive options to help women have the number of children they want. It set a limit on the number of births parents could have making it the

China Birth Control Policy: Controversial but very

December 29th, 2019—By the early 1970s Mao had revised his opinion about the advantages of a large population but not before China had grown by more than 300 million people in the two decades after 1949.

China Population Control Programs Country Studies

June 4th, 2020—Initially China's post-1949 leaders were ideologically disposed to view a large population as an asset but the liabilities of a large rapidly growing population soon became apparent for one year starting in August 1956 vigorous propaganda support was given to the ministry of public health's mass birth control efforts.
June 2nd, 2020 - the aggressive implementation of the one child policy in China had significant impact on the growth of the birth rate and population in the country. The birth rate in China fell from 1979 onwards and the rate of population growth dropped to 0.7 this caused unexpected imbalances in the demographic development of the country.

**The astonishing population averted by China's birth**

May 25th, 2020 - China launched an unprecedented program to control its population in 1971. Experts have dismissed the official estimate of 400 million births averted by this program as greatly exaggerated. Yet neglect to provide their own estimates. Counterfactual projections based on fertility declines in other countries suggest that China's program averted population numbered 360,520 million as of 2015.

**China total population 1980-2024 Statista**

June 4th, 2020 - In 2017, the Chinese population amounted to around 1.39 billion people and is expected to grow up to 1.41 billion by 2023.

**AllRefer China population control programs**

May 10th, 2020 - Population control programs initially China's post-1949 leaders were ideologically disposed to view a large population as an asset. But the liabilities of a large, rapidly growing population soon became apparent. For one year starting in August 1956, vigorous propaganda support was given to the Ministry of Public Health's mass birth control.

**Estimates of missing women in twentieth century China**

January 28th, 2017 - During the Republic of China period from 1911-1949, the number of missing women in the birth cohorts was 17.62 million or a high 8.90 per cent of the expected total of females for 1911-1949 birth cohorts in the corresponding census. This period can be further divided into four smaller periods as shown in Table 3.

**Population increment China cn**

April 21st, 2020 - When the PRC was founded in 1949, China had a population of 541.67. China had implemented the policy of population increment control and thus the birth rate began to decrease by 2000.

**Estimating the effect of the one child policy on the sex**

May 12th, 2020 - In China, the male biased sex ratio has increased significantly because the one child policy applies only to the Han Chinese but not to minorities. This unique affirmative policy allows us to identify the causal effect of the one child policy on the increase in sex ratios by using a difference in differences estimation using the 1990 census.
