fuzzy adaptive decentralized output feedback control for
May 27th, 2020 - Based on the backstepping design and adaptive fuzzy control methods, an adaptive fuzzy decentralized robust output feedback control scheme is developed. It is proved that the proposed...
adaptive fuzzy control approach can guarantee that all the signals in the closed loop system are uniformly and ultimately bounded and the tracking errors converge to a small neighborhood of the origin. In this paper, we establish new results to the problem of output feedback control design for a class of nonlinear interconnected continuous time systems subject to input saturation. New schemes based on overlapping design methodology are developed for both static and dynamic output feedback control.
structures the theoretical developments are illustrated by numerical simulations of a"
