atomic force microscopy nanoscience instruments
June 5th, 2020 - Atomic force microscopy has a feedback loop using the laser deflection to control the force and tip position as shown. A laser is reflected from the back of a cantilever that includes the AFM tip. As the tip interacts with the surface, the laser position on the photodetector is used in the feedback loop to track the surface for imaging and measuring. Atomic force microscopy biological aspects 2015
May 19th, 2020 - A prominent high scale fraction of a nanometer measurement technique for material science atomic force microscopy AFM was invented in 1986. AFM is a powerful tool to provide various information via detecting the weak interactions between the tiny tip on a cantilever and the sample surface.
