March 30th, 2018 - Pokrovnik has deposits of both the early impressed ware and middle Danilo Neolithic phases. It thus complements the sequence from the site of Danilo Bitinj, where the excavated deposits were of the Danilo culture phase. According to preliminary results, farming reached Dalmatia in fully developed form, probably brought by immigrating farmers.

Evidence of 7,200 Year Old Cheese Making Found on the

May 17th, 2020 - The presence of milk in pottery in this area is seen as early as 7,700 years ago. 500 years earlier than fermented products, said the researchers. The researchers looked at pottery from two sites in Croatia - in Dalmatia, Pokrovnik, and Danilo Bitinj. Dairying and especially cheese and fermented milk products may have opened northern European areas for farming because it reduced infant mortality and allowed for earlier weaning, decreasing the birth interval and potentially.
