June 1st, 2020 - in the ant colony optimization algorithms an artificial ant is a simple putational agent that searches for good solutions to a given optimization problem to apply an ant colony algorithm the optimization problem needs to be converted into the problem of finding the shortest path on a weighted graph in the first step of each iteration’

solution of multiple travelling salesman problem using.
June 1st, 2020 - nowadays the systems that are inspired by biological structures have gained importance and attracted the attention of researchers the multiple travelling salesman problem mtsp is an extended version of the tsp the aim in the mtsp is to find the tours for m salesmen who all start and end at the depot such that each intermediate node is visited exactly once and the total cost of visiting’

Ant colony optimization presents the most successful algorithmic techniques to be developed on the basis of ant behavior. This book will certainly open the gates for new experimental work on decision making, division of labor, and communication. Moreover, it will also inspire all those studying patterns of self-organization.
