Bartonella causes an important emerging infection that was first reported in 1990. Bartonella encephalitis is hard to see on a regular MRI of the brain. A neurologist really needs to know his stuff unless you present lesions. The reason Bartonella encephalitis is hard to see on an MRI is Bartonella is a small vessel disease meaning you need a very detailed MRI that many facilities just don’t have.

Bartonella encephalitis can be hard to see on a regular MRI of the brain. A neurologist really needs to know his stuff unless you present lesions. The reason Bartonella encephalitis is hard to see on an MRI is Bartonella is a small vessel disease meaning you need a very detailed MRI that many facilities just don’t have.
